Summary

U.S. coal production in the week ended November 28, 1992, as estimated by the Energy Information Administration from railroad car loadings, totaled 16 million short tons. This was 22 percent less than in the previous week, reflecting the Thanksgiving Day holiday, and

about the same as in the comparable week in 1991, which also included the Thanksgiving Day holiday.

Production east of the Mississippi River totaled 8 million short tons, and production west of the Mississippi River totaled 7 million short tons.
